

## Activity 6.10

### Investigating the effect of temperature on the rate of photosynthesis

#### Skills

A03.1 Using techniques, apparatus and materials

A03.2 Planning

A03.3 Observing, measuring and recording

A03.4 Interpreting and evaluating observations and data

You are going to plan and carry out an experiment to find out how temperature affects the rate of photosynthesis.

You can use a similar technique to the one described in Activity 6.8.

You can vary the temperature by standing the apparatus in water baths kept at different temperatures.
